

Auto4 introduces latest Sice models

THE SICE RANGE of garage equipment, exclusively distributed in the UK by Auto4, features some of the most popular tyre changers and wheel balancers available in the market today. And whether a customer seeks equipment for mobile vans, small tyre bays, mot stations or fast fit, Auto4 says its expert team of experienced sales staff and engineers will help them find the right piece of equipment. Furthermore, the company says each and every tyre changer and wheel balancer it sells goes through a strict pre delivery inspection, so all the new owner needs to do upon receipt is plug it in and start. All equipment comes with a two year parts and labour warranty.

Amongst Auto4's increasing equipment offering is the Sice S100 PL tyre

changer. This unit features centre clamping, making it suitable for use with rim sizes from 12 to 28-inches; an ergonomic wheel lift, included as standard, which allows easy positioning of all wheel types; a dynamic double bead breaking device that makes easy work of the hardest wheels; and the Nexion group's tried and tested lever less demount head, which eliminates damage to rims and fitters backs. Auto4 believes Sice has "produced a winning combination" in the S100 PL.

Auto4 is also introducing the new automatic S73 balancer with sonar measuring. "This fantastic, fully automatic measuring wheel balancer has laser light guidance for weight placement on alloy wheels. It also has an illuminated work area and a large weight tray and is the

ideal balancer for all garages that want something more from their balancer. We believe this is the best value, highest specification wheel balancer on the market with two years parts and labour warranty as standard," says the exclusive distributor.

The team at Auto4 say they are so convinced that once a customer tries Sice equipment they won't want any other brand. The company offers a two week trial to allow potential customers hands-on usage before deciding to purchase.
